

Broad Street Bank
Retrofit
CGC Group
Hybrid Heat Pump

Trenton, NJ

The Project

The restoration of this century old skyscraper required a HVAC retrofit. Preserving the historic nature of the building required a system with a small footprint. Low electrical consumption was a priority due to the limitations on the available service, and the need for greater efficiency.

The Solution

The CGC Hybrid Heat Pump System with its retrofit friendly design proved to be the perfect choice for this historic restoration. The low profile horizontals were concealed in the ceilings and console units were surface mounted with little intrusion on the aesthetic value of the interior. An efficient central heating plant, with the CGC's unique *Heat Recovery* system, services the entire building. This ultra quiet, super efficient system raised the comfort level of the Broad Street Bank Building, while meeting and exceeding their energy requirements.
